

# Low Cost Wind Turbine workshop with Daniel Connell

Hosted by LUDD  
Makerspace

Sunday, 4.02.2018  
at 12 PM - 7:30 PM

Tsotiliou 3,  
10447 Athens,  
Greece

**Cost: 25 Eur** (including  
snacks & lunch)

**Booking** (limited places): [hello@ludd.gr](mailto:hello@ludd.gr)

Daniel Connell is a renewable energy and open source technology designer. For the last eight years he has been working on setting up collaborative project spaces and giving practical making workshops in Australasia, South Asia, Europe, and Central America.

He will be showing you how to build and install a simple, low cost vertical axis wind turbine using easily sourced local recycled materials and basic hand tools. It's an easy process, no previous experience is necessary. The turbine is powerful, rooftop-scale, sturdy, safe, quiet, and efficient.

There are limited places available, so booking is essential.

There will also be a presentation and open discussion on off-grid living, low-tech alternative infrastructure and open source hardware at 20:00 right after the workshop takes place.

All tools and materials are provided.

Feel free to share and invite others.

See you there!
